Zobrazovací metody srdce

Echokardiografie

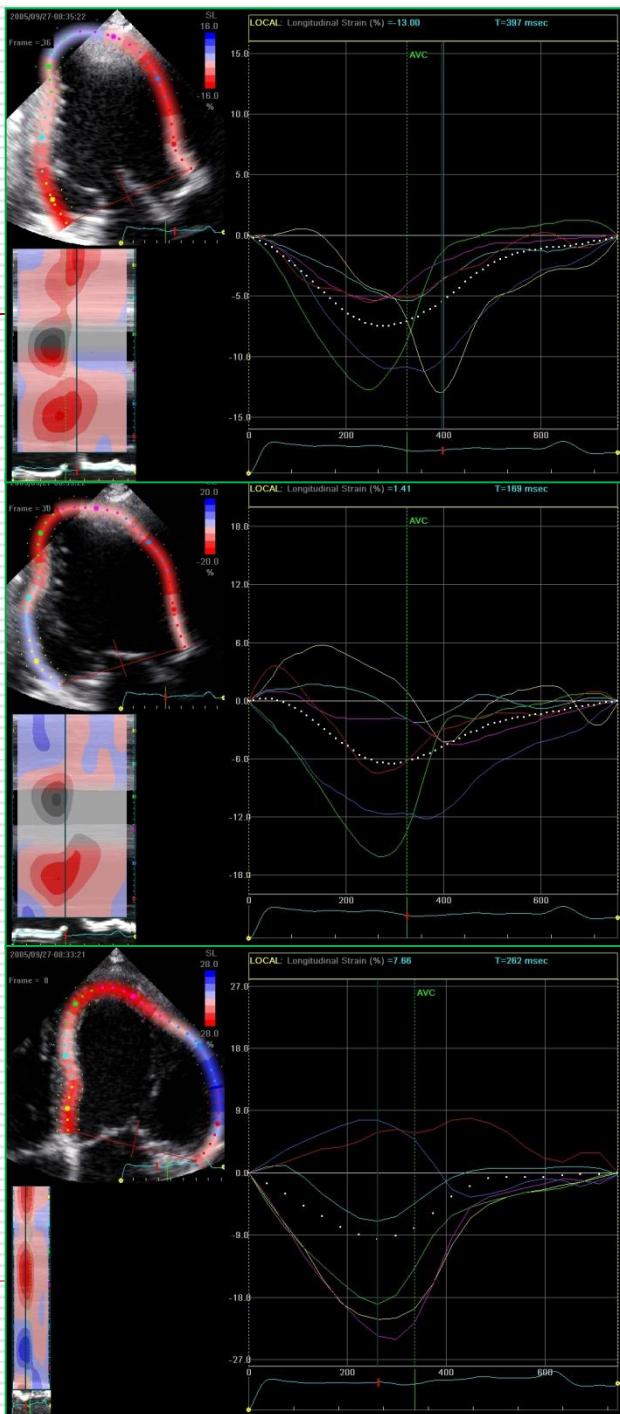

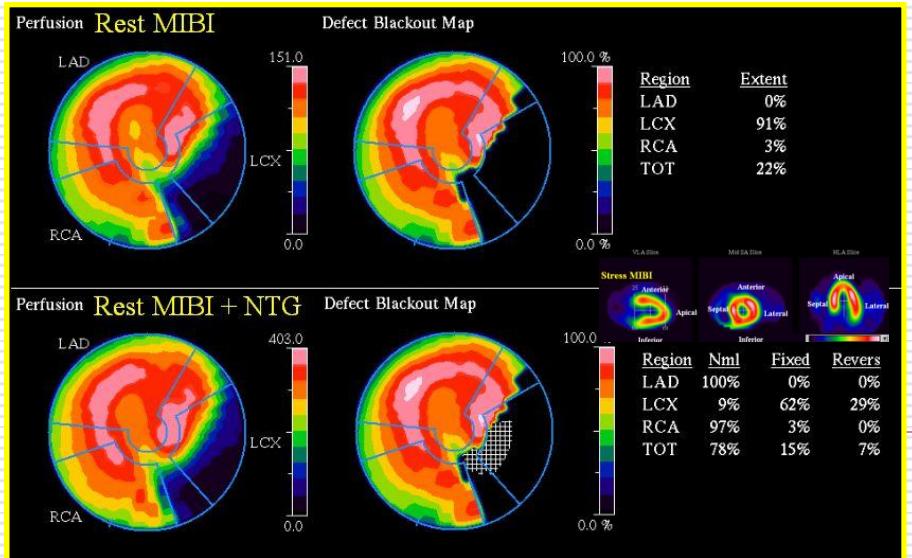

- Dobutaminová zátěžová, deformace myokardu LK...

Magnetická rezonance

- T1, T2, LGE...

SPECT a PET myokardu

- Perfuzní scintigrafie myokardu
- metabolizmus

Echokardiografie - metody

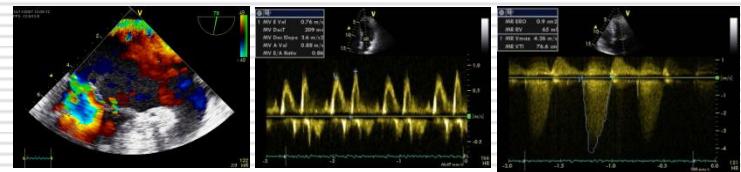

- **MM/2DE/RT 3DE**

- **CEE**

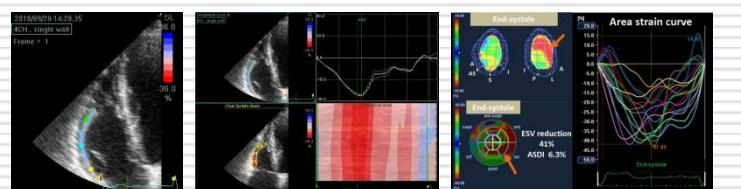

- **Doppler (CFM, PWD, CWD)**

- **Tissue Doppler imaging**

- **2D/3D strain**

GUIDELINES

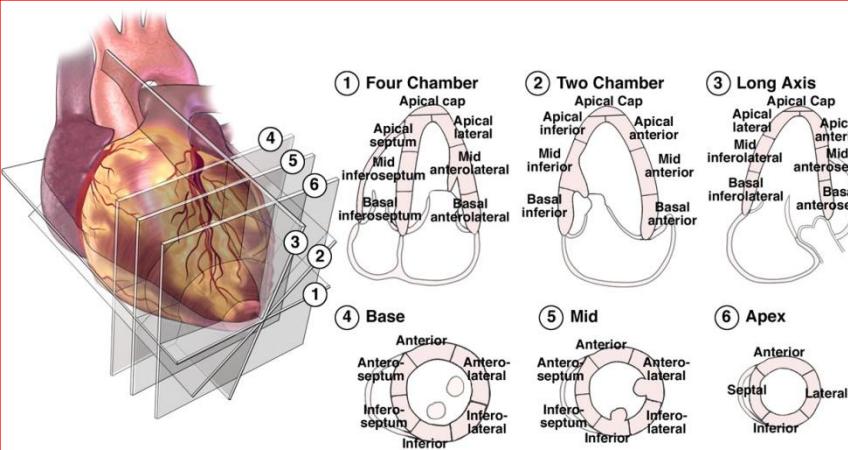

Recommendations for chamber quantification[☆]

Roberto M. Lang, Michelle Bierig, Richard B. Devereux,
 Frank A. Flachskampf*, Elyse Foster, Patricia A. Pellikka,

Standardized myocardial segmentation and nomenclature for tomographic imaging of the heart: A statement for healthcare professionals from the Cardiac Imaging Committee of the Council on Clinical Cardiology of the American Heart Association

Manuel D. Cerqueira, MD,^b Neil J. Weissman, MD,^a Vasken Dilsizian, MD,^b Alice K. Jacobs, MD,^c Sanjiv Kaul, MD,^a Warren K. Laskey, MD,^d Dudley J. Pennell, MD,^e John A. Rumberger, MD,^c Thomas Ryan, MD,^a Mario S. Verani, MDH^f,^b and American Heart Association Writing Group on Myocardial Segmentation and Registration for Cardiac Imaging^{a,b,c,d,e}

Left Ventricular Segmentation

- 1. basal anterior
- 2. basal anteroseptal
- 3. basal inferoseptal
- 4. basal inferior
- 5. basal inferolateral
- 6. basal anterolateral
- 7. mid anterior
- 8. mid anteroseptal
- 9. mid inferoseptal
- 10. mid inferior
- 11. mid inferolateral
- 12. mid anterolateral
- 13. apical anterior
- 14. apical septal
- 15. apical inferior
- 16. apical lateral
- 17. apex

Coronary Artery Territories

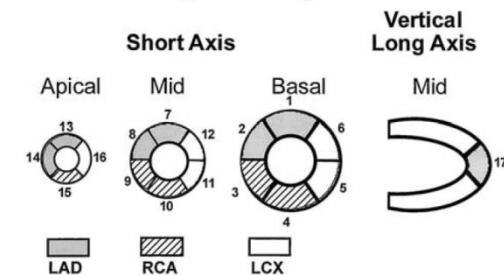

Figure 5. Assignment of the 17 myocardial segments to the territories of the left anterior descending (LAD), right coronary artery (RCA), and the left circumflex coronary artery (LCX). Modified from reference 5.

Kdy, komu a proč?

ESC Guidelines for the management of acute myocardial infarction in patients presenting with ST-segment elevation

The Task Force on the management of ST-segment elevation acute myocardial infarction of the European Society of Cardiology (ESC)

Hospitalizace - příjetí - dimise ...

40. den od vzniku IM

	At presentation	Within 48 h	Before or after discharge	Recommendations	Class^a	Level^b
Echo at rest	If required for diagnosis	For LV function and presence of thrombus	For LV function, heart failure, shock, or new murmur For ischaemia For viability and ischaemia, infarct size For viability and ischaemia For viability For LV function, infarct size, viability, and ischaemia	At presentation In the acute phase, when diagnosis is uncertain, emergency echocardiography may be useful. However, if inconclusive or unavailable and persistent doubt, emergency angiography should be considered.	I	C
Stress ECG				After the acute phase All patients should have an echocardiography for assessment of infarct size and resting LV function.	I	B
Stress perfusion SPECT				If echocardiography is not feasible, MRI may be used as an alternative.	IIb	C
Stress echo						
PET (rest)				Before or after discharge For patients with multivessel disease, or in whom revascularization of other vessels is considered, stress testing or imaging (e.g. using stress myocardial perfusion scintigraphy, stress echocardiography, positron emission tomography or MRI) for ischaemia and viability is indicated.	I	A
MRI (rest, stress, contrast-enhanced)				Computed tomography angiography has no role in the routine management of STEMI patients.	III	C
