# Introduction

- Pulsed-field ablation (PFA): Emerging technology for AF ablation.
- Radiofrequency ablation (RFA): Established method.
- Study Aim: Single-center comparison of PFA vs RFA.

# Study Methods

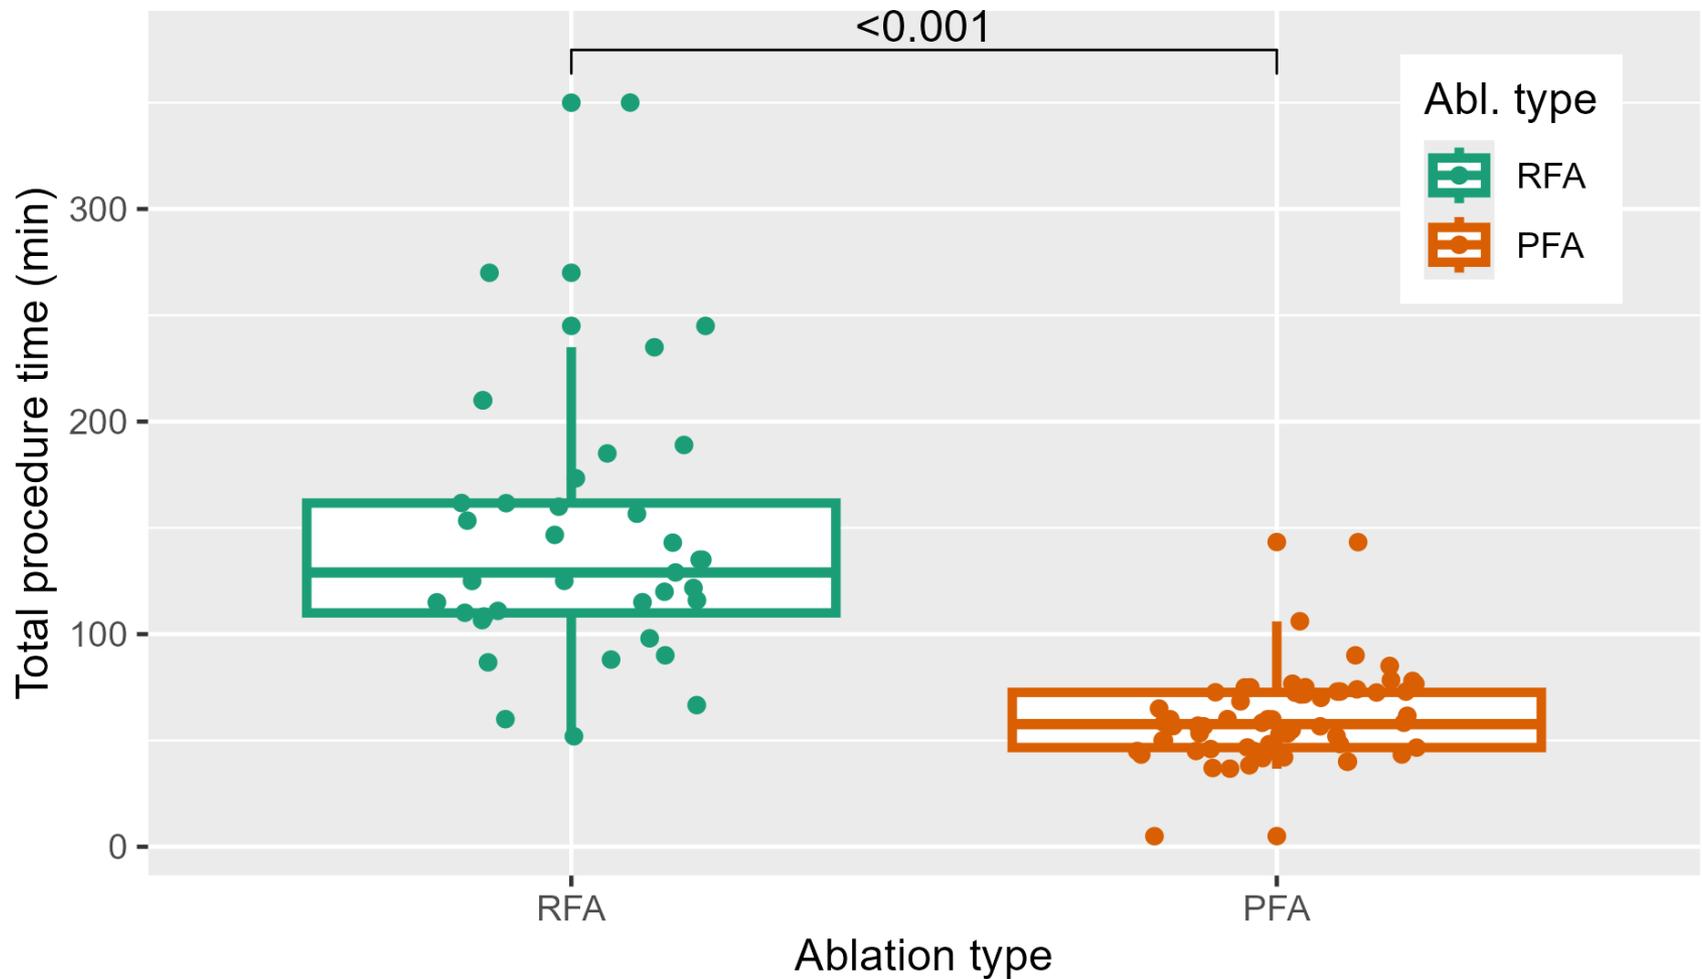

- Single center, non-randomized, cohort study.
- All consecutive patients were enrolled
- 437 patients: 319 PFA, 118 RFA.
- Paroxysmal AF: Only PVI.
- Non-paroxysmal AF: Posterior wall and MI isthmus in PFA group. In the RF group, additional ablations beyond PVI on the operator's discretion.
- 24-hour Holter monitoring and clinical check-up 3, 6-9 and 12 months after AF ablation to assess SR maintenance.

# Patient Characteristics

	PFA group 319	RFA group 118	p
Age	63.1± 12.7	65.4 ± 10.7	0.05
Male sex (%)	207 (65.3)	84(72.1)	0.27
Hypertension (%)	212 (66.7)	81 (68.8)	0.99
Diabetes mellitus (%)	57 (18.2)	37 (31.3)	0.26
Body mass index	29.9 ± 4.9	30.3 ± 5.2	0.20
CHA <sub>2</sub> DS <sub>2</sub> VASc score	2.39 ± 1.68	2.28 ± 1.69	0.79
Paroxysmal AF (%)	159(49.8)	73 (62)	0.03
ECHOCardiography			
LV EF (%)	42.6 ± 4.8	41.2 ± 4.9	0.75
LA size (mm)	41.7 ± 5.8	43.3 ± 5.1	0.25
Medication			
Current AAD use (%)	145 (45.5)	63 (53.1)	0.62

# Total procedure time by ablation modality

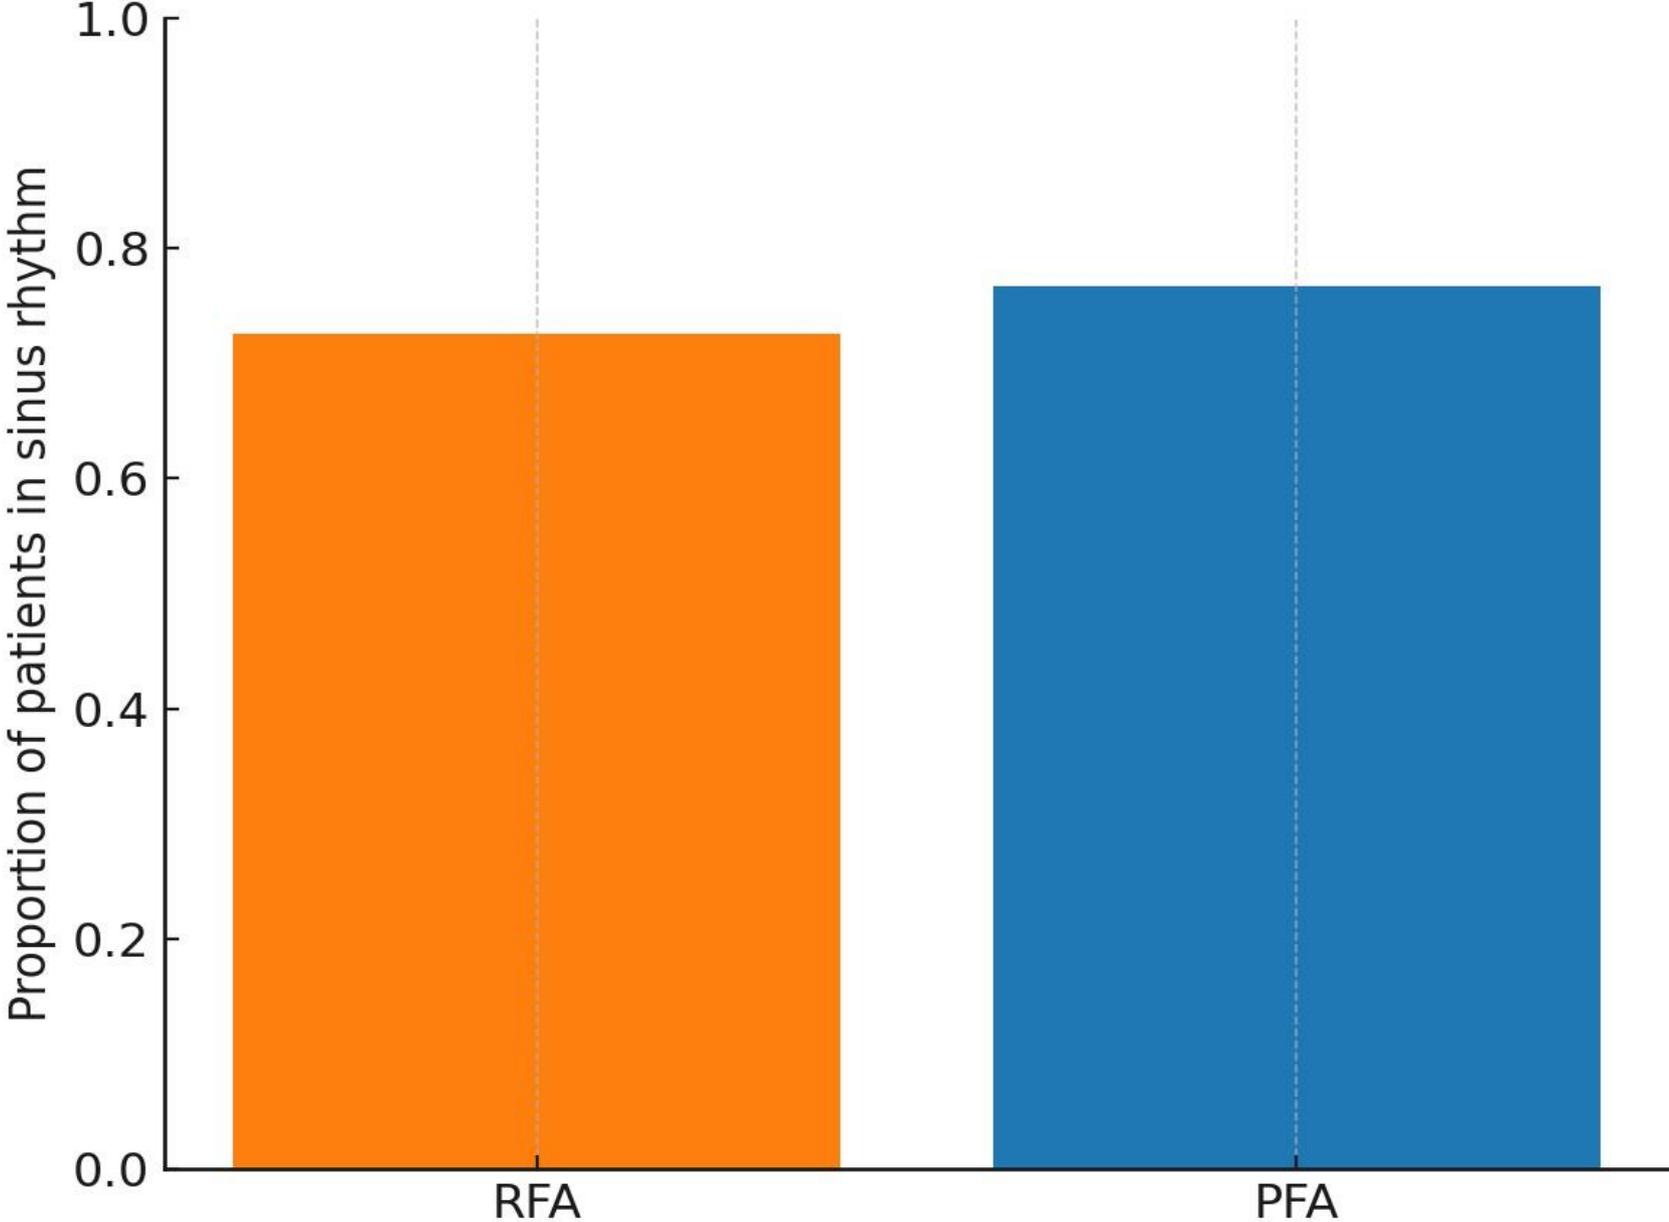

Wilcoxon

# LA dwell time by ablation modality

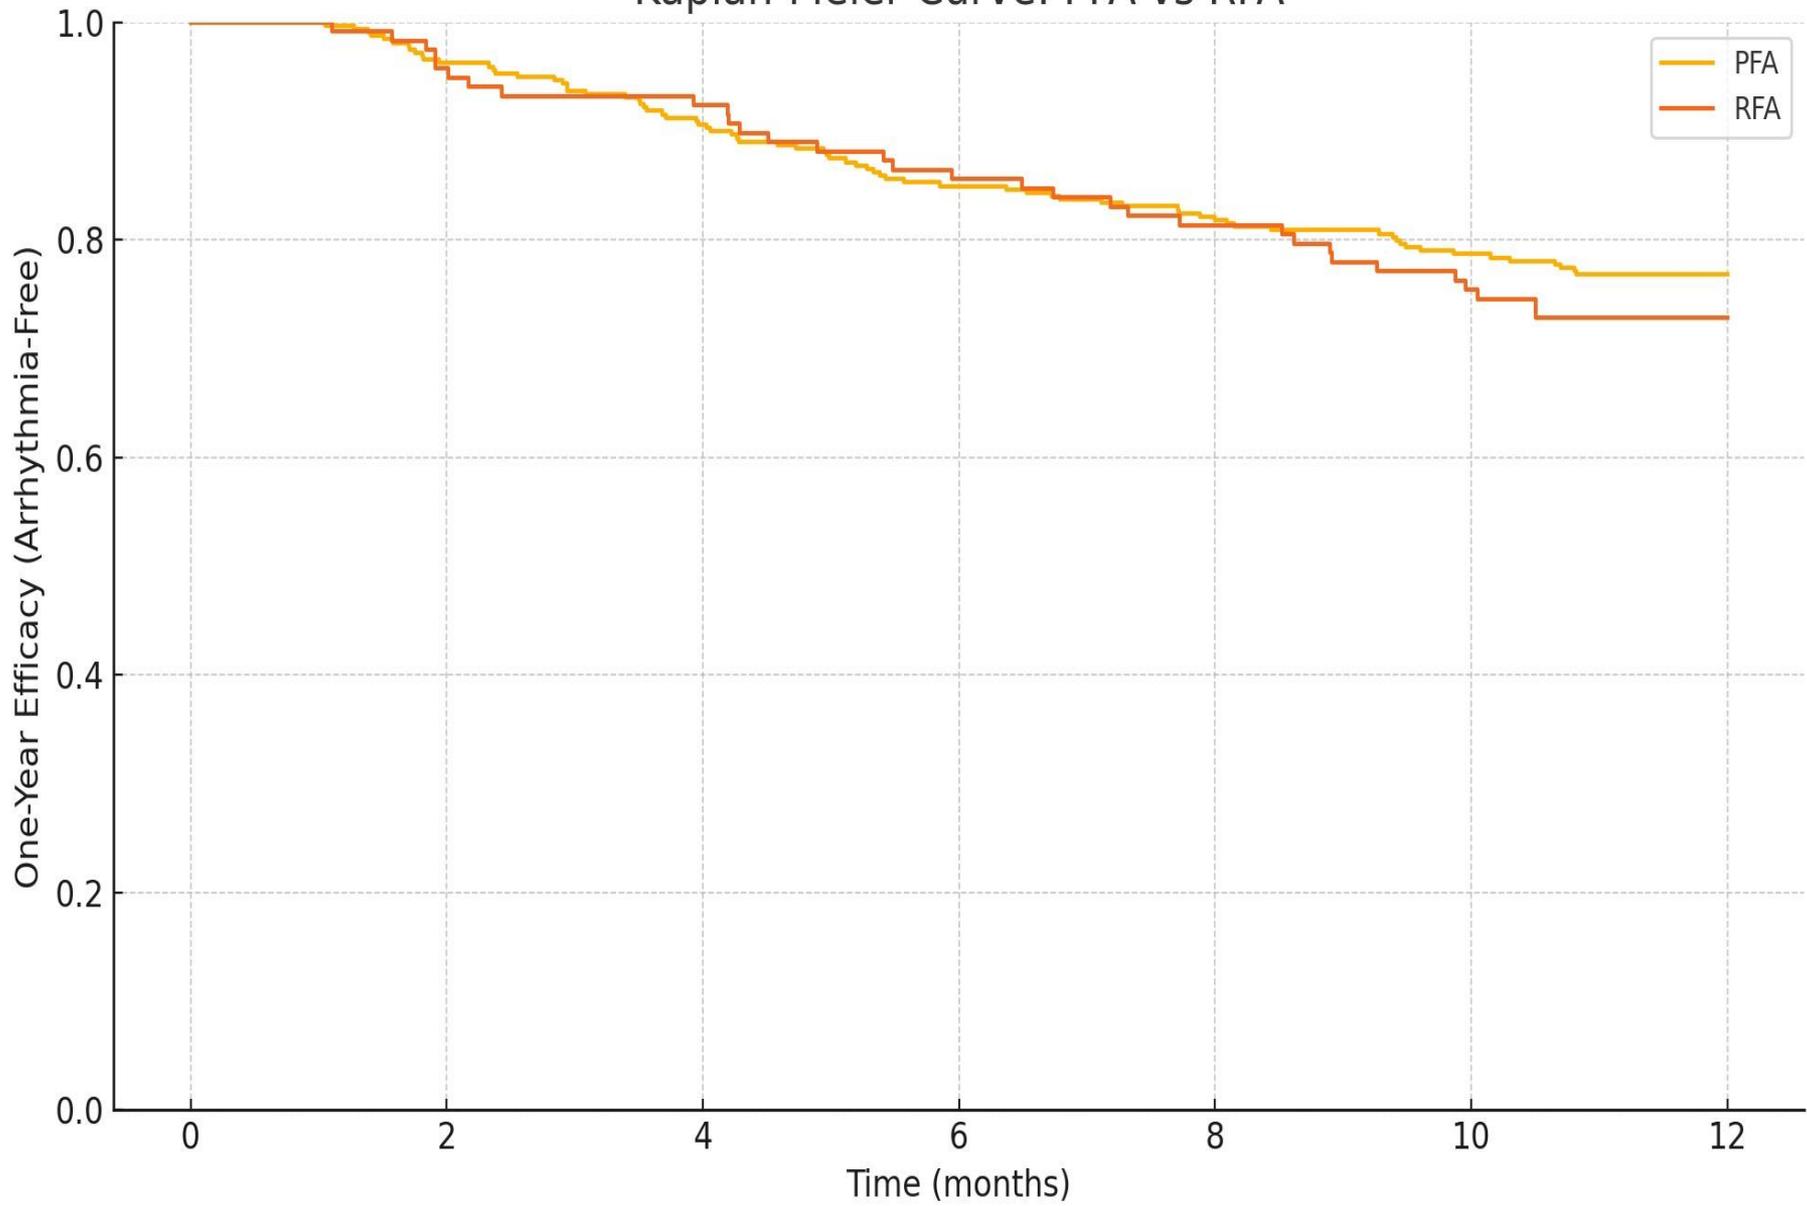

Wilcoxon

# Freedom from AF Recurrence at 12 Months

### Kaplan-Meier Curve: PFA vs RFA

# Safety Profile

- Major adverse events: 1 in each group.
- Cardiac arrest (PFA), pericardial effusion (RFA).
- Very low complication rates overall.

# Conclusion

- PFA associated with:
  - - Shorter procedural and LA dwell times.
  - - Similar safety profile.
  - - Comparable 1-year efficacy.
