Introduction

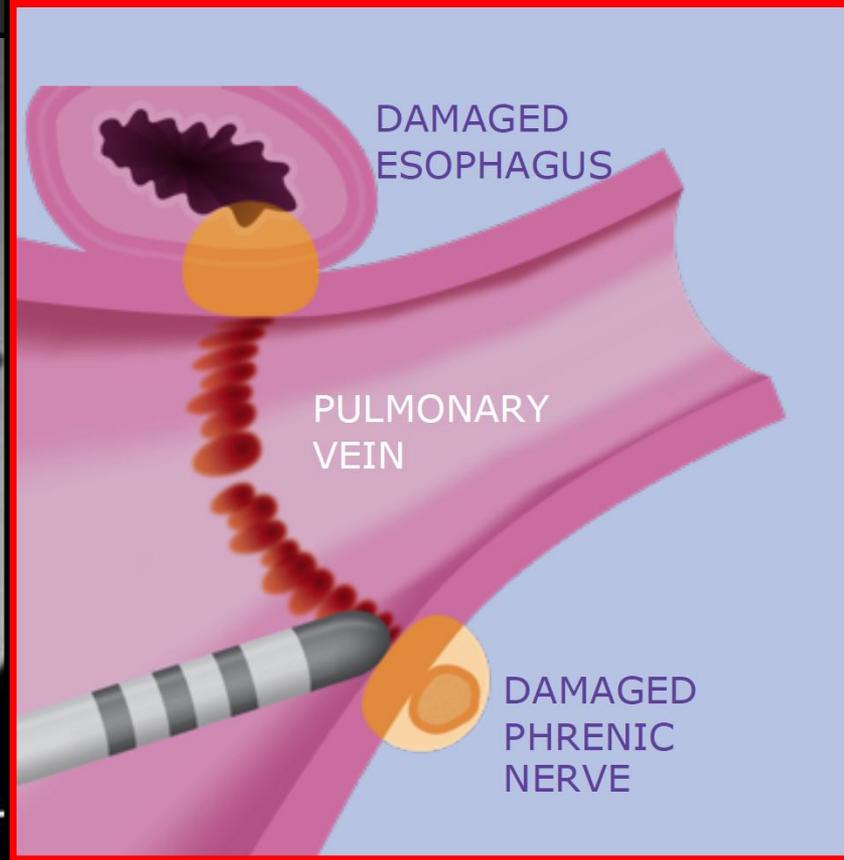

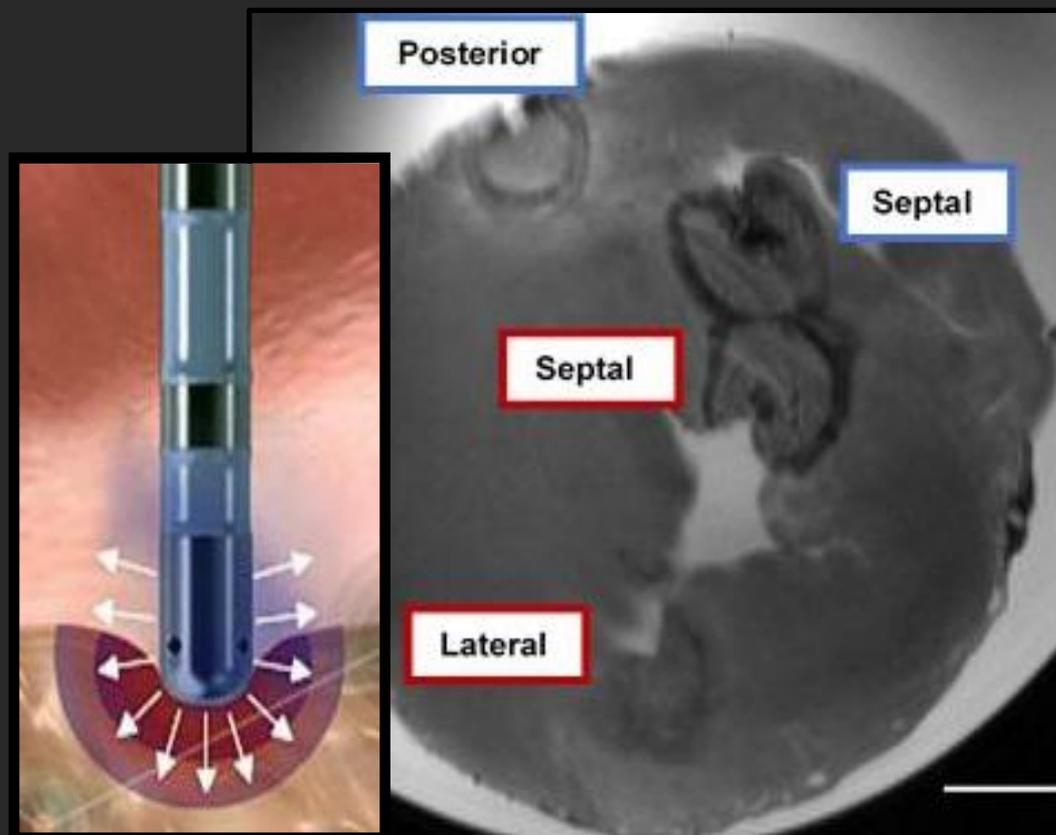

- Radiofrequency (RF) catheter ablation of atrial fibrillation (afib) has been the most effective method in the treatment of this arrhythmia in recent years
- The use of irreversible electroporation (puls field ablation, PFA) appears to be a promising method
- The aim of our study is to show the one-year results of a project comparing the efficacy and safety of the catheter ablation of the atrial fibrillation using point to point CENTAURI PEF System (CardioFocus Inc.) and standard 3D mapping guided RF ablation

Random. Comparison Afib Abl. CENTAURI vs standard RFA

Introduction

- Radiofrequency ablation
 - Application of high frequency electric current
 - Thermal damage of the cardiomyocytes
 - Limited efficacy and risk of complications

RADIOFREQUENCY ABLATION

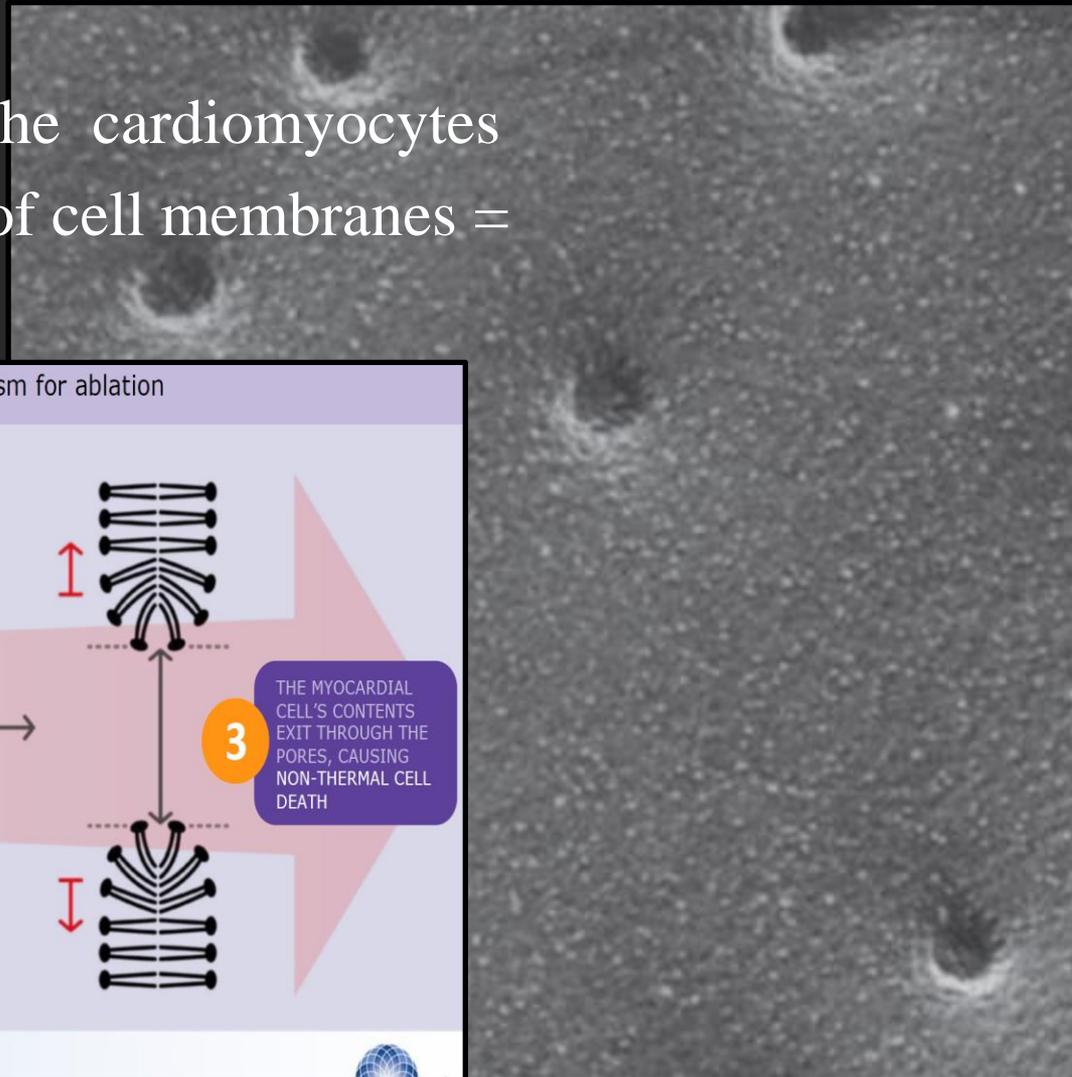

Random. Comparison Afib Abl. CENTAURI vs standard RFA

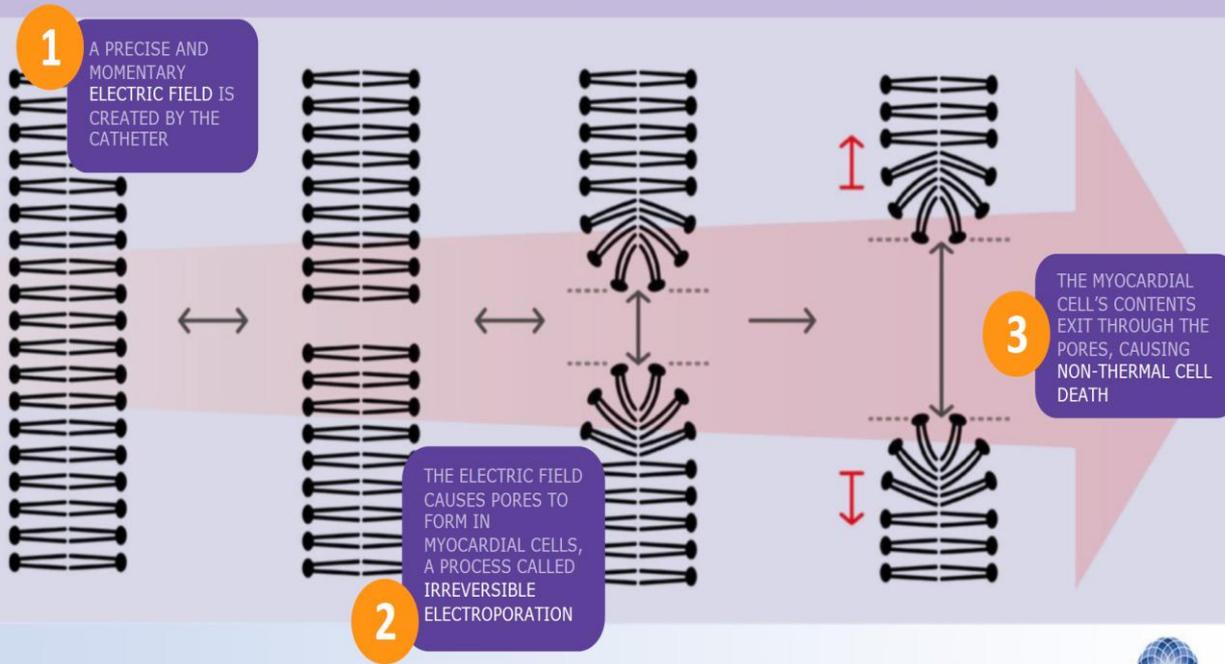

Introduction

■ Irreversible electroporation

- Application of high voltage pulses of electrical current
- Non thermal damage of the cardiomyocytes
- Formation of nano pore of cell membranes = apoptosis or necrosis

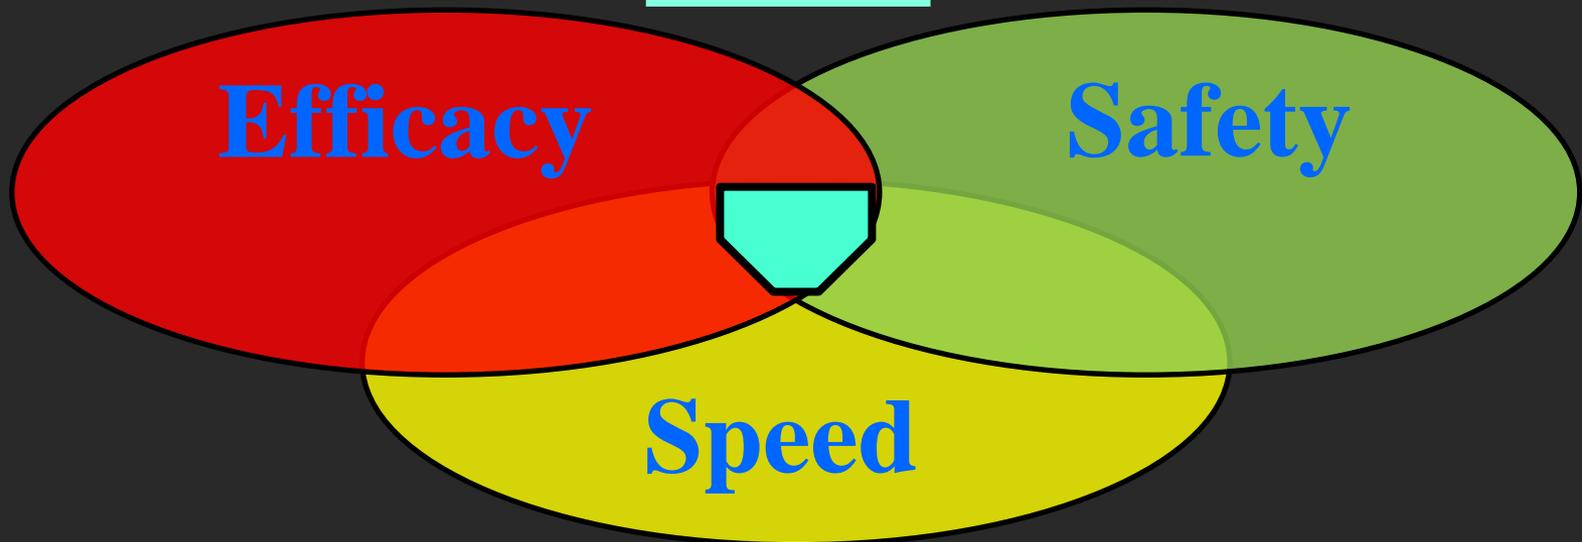

Irreversible Electroporation - not heating or cooling - is PFA's mechanism for ablation

Irreversible electroporation in the treatment of cardiac arrhythmias

Introduction

PFA

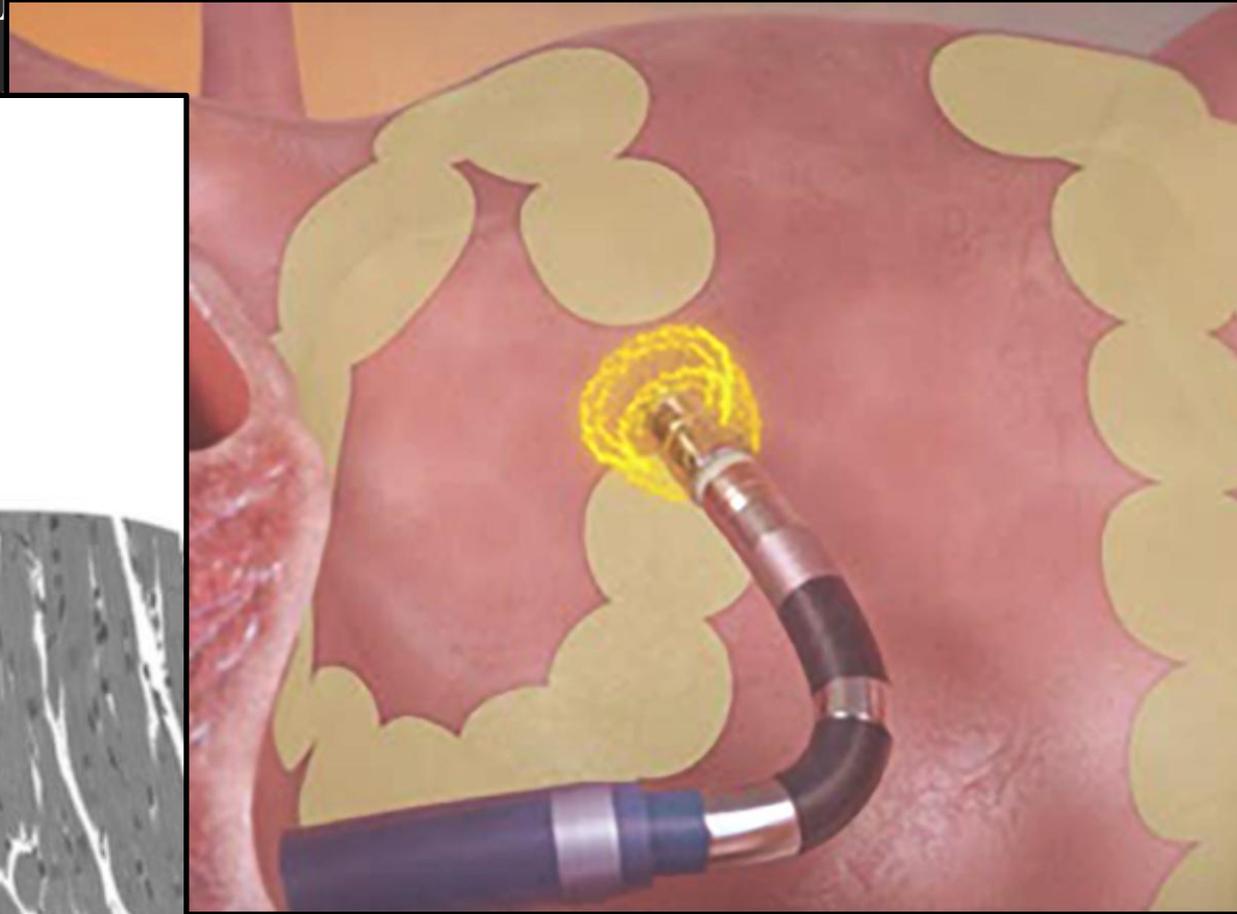

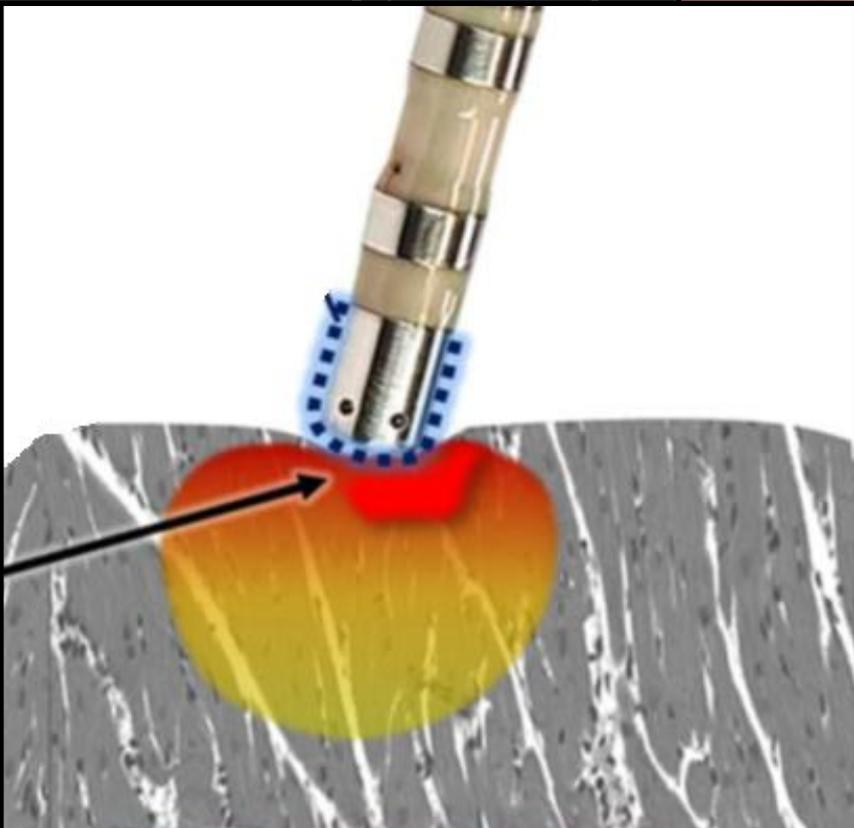

Introduction

- PFA systems in the clinical practice
 - Farapuls (Boston Scientific)
 - Centauri PEF (Galvanize EP)
 - Affera (Medtronic)
 - Varipuls (Biosense Webster)

Point to point application of the PFA using standard contact force irrigation catheter with support of the 3D electroanatomical mapping system (EnSite or Carto)

Introduction

Box lesion

The screenshot displays a cardiac ablation software interface. At the top, the menu bar includes 'File', 'Amplifier', 'HotKeys', and 'Help'. The main window shows a 3D anatomical model of the heart with ablation points (red and blue spheres) and a box lesion. The interface includes a toolbar on the right with various icons for navigation and manipulation. A 'Surfaces' panel on the right lists anatomical surfaces: Left (LA, LSPV, LIPV, LAA, RSPV, RIPV), Right (RA), and Other (LA). The bottom of the interface features a 'Velocity' and 'Respiration' graph, a 'Score' readout (Score 0, CL ---ms, LAT 0ms), and a 'Field Scaling' section with 'Compute', 'Auto', and 'Apply' options. The status bar at the bottom indicates 'Segment 01: Seg 00001' and '1:1'.

and roof of the LA**

Introduction

- The aim of my presentation is to show the one-year outcomes of a randomized comparison of efficacy and safety of catheter ablation for AF using
 - Standard 3D mapping and ablation with contact force (CF) catheter using PFA generated by the Centauri PEF system
 - Standard radiofrequency ablation with the same approach

Random. Comparison Afib Abl. CENTAURI vs standard RFA

Methods

- Patients referred for ablation of paroxysmal and persistent AF were enrolled in the study
- All pts were mapped and ablated in the same manner
- The EnSite Precision 3D mapping system (Abbott) for left atrial mapping, Tacticath CF ablation catheter (Abbott) for standard point-to-point RF ablation
- The basis was pulmonary veins isolation
- Cardioversion in the case of persistent afib
- Voltage remapping
- Atrial wall fibrosis - adjuvant linear lesions across the scar were created according to St Anns protocol

Random. Comparison Afib Abl. CENTAURI vs standard RFA

Deep sedation

Methods

- The following parameters were statistically compared
 - Procedure parameters
 - total time, ablation time, ipsilateral pulmonary vein isolation time, X-ray dose, acute effect, first pass effect
 - Complications
 - acute, medium and long-term
 - Follow up
 - 3, 6 and 12months follow up

Random. Comparison Afib Abl. CENTAURI vs standard RFA

Results

Basic parameters all afib

- 5.3.2023 – 1.11.2024 a total of 164 patients underwent catheter ablation for afib
 - 95 with paroxysmal afib
 - 69 with persistent afib
 - 106 pts PFA group
 - 58 pts RFA group
 - The baseline characteristics both groups were similar

Basic parameters	PFA (n=106)	RFA (n=58)
Age (years)	61 ± 14.5	66 ± 13.1
Sex (women in %)	26	28
BMI (kgm-2)	29.9 ± 5.5	30.1 ± 5.3
LV EF (%)	58.0 (56.0–65.0)	55.0 (57.8–65)
Size LS (mm)	44 ± 6	46 ± 6
Structural heart disease	22 (21%)	11 (20 %)
ICHS	8 (8 %)	5 (9%)
Valve disease	2 (2 %)	(0 %)
DCMP	8 (8 %)	0 (4%)
HCMP	1 (1 %)	0 (6 %)
Hypertension	60 (56 %)	40 (70 %)
Diabetes mellitus	13 (13 %)	10 (17 %)
AA medication	89 (84%)	51 (89%)
Anticoagulation	98 (93%)	55 (95%)

Random. Comparison Afib Abl. CENTAURI vs standard RFA

Results

Periprocedural parameters

- Some parameters were significantly different in the PEF group
 - Shorter procedure time
 - Shorter ablation time
 - Shorter ipsilateral vein isolation time
 - Higher probability of pulmonary vein isolation on first pass
 - Longer duration of anesthesia

Results

Comparison

Results

Comparison Afib Abl. CENTAURI vs standard RFA

Follow up 6 months all afib

	No of pts	Recurrence	AF	Other arrh.
PFA	47	12 (26%)	10 (83%)	2 (17%)
RFA	35	5 (15%)	4 (80%)	1 (20%)

Follow up 12 months all afib

Paroxysmal AF	Number	Recurrence	AF	Other arrh.
PFA	29	8 (28%)	7 (88%)	1 (12%)
RFA	10	4 (40%)	2 (50%)	2 (50%)

Random. Comparison Afib Abl. CENTAURI vs standard RFA

Results

Follow up

- Assessment of long-term efficacy is limited by the relatively small sample size of available follow-up data

Random. Comparison Afib Abl. CENTAURI vs standard RFA

Results

Complications

- No severe acute or subacute complications were recorded in both groups
- Centauri group – 3 pts (2,8%) had groin complications
- RFA group - 2 (3,4%) had groin complications

Random. Comparison Afib Abl. CENTAURI vs standard RFA

Conclusion

- Centauri PEF system is non-inferior compared to the standard RFA
- In some parameters is significantly better
 - Shorter procedure time
 - Shorter ablation time
 - Shorter ipsilateral vein isolation time
 - Higher probability of pulmonary vein isolation on first pass
 - Longer duration of anesthesia
- Follow up seems to be comparable
 - This is limited by small number of pts with longterm follow up

Conclusion

- Centauri PEF system is universal and flexible ablation system
- „dream of the electrophysiologist“ – precise, powerful, fast
- Could be used in many EP scenarios
 - For atria and ventricles
 - With or without 3D mapping
 - Endocardially or epicardially
- Long term efficacy need further studies
- Centauri PEF system needs further development

Thank you for your attention
